Département: Computer Science

Level: Two

Decision Making Statements

- In **VB.NET**, both If and Select Case are used for decision-making, but they are used in slightly different situations.

1. **If Statement in VB.NET**

The If statement checks a condition.

If the condition is True, the code inside it runs.

➤ **Basic Syntax**

If condition Then

 Code to execute

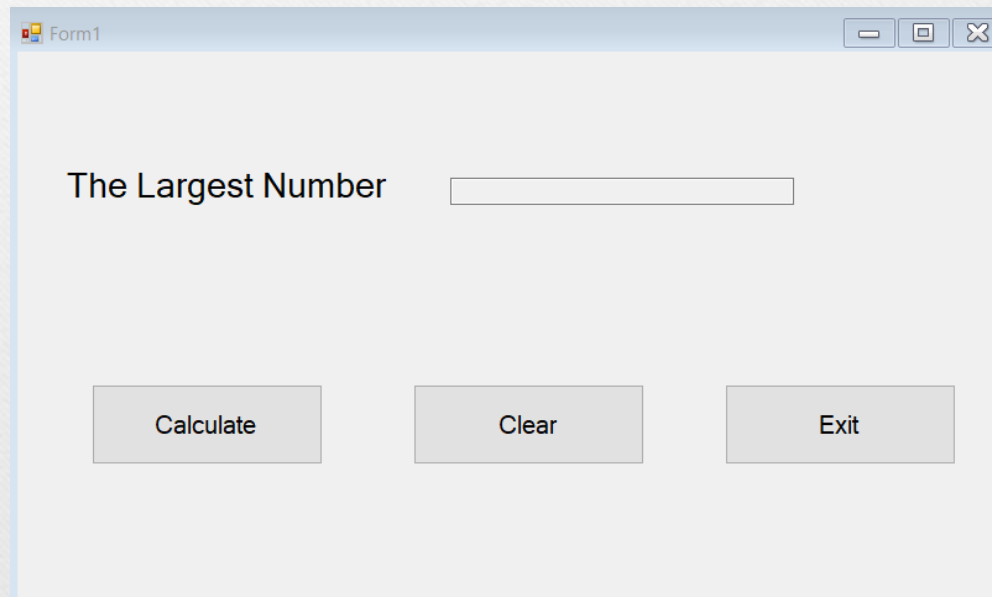

Else

 Code to execute

End If

Decision Making Statements

- **Example:** Design the following Form and get the Largest Number from an InputBox.

The screenshot shows a Windows application window titled "Form1". Inside the window, there is a text label "The Largest Number" followed by a text input box. Below the input box, there are three buttons arranged horizontally: "Calculate", "Clear", and "Exit". The buttons are light gray with black text. The window has a standard Windows title bar with minimize, maximize, and close buttons.

Decision Making Statements

```
Public Class Form1
    0 references
    Private Sub Button1_Click(sender As Object, e As EventArgs) Handles Button1.Click
        Dim X, Y As Integer
        X = InputBox("Enter The First Number")
        Y = InputBox("Enter The Second Number")
        If X >= Y Then
            TextBox1.Text = X
        Else
            TextBox1.Text = Y
        End If
    End Sub

    0 references
    Private Sub Button2_Click(sender As Object, e As EventArgs) Handles Button2.Click
        TextBox1.Clear()
    End Sub

    0 references
    Private Sub Button3_Click(sender As Object, e As EventArgs) Handles Button3.Click
        End
    End Sub
End Class
```

Decision Making Statements

- **Nested If**

- **Syntax:**

If condition Then

Code to execute

Elseif

Code to execute

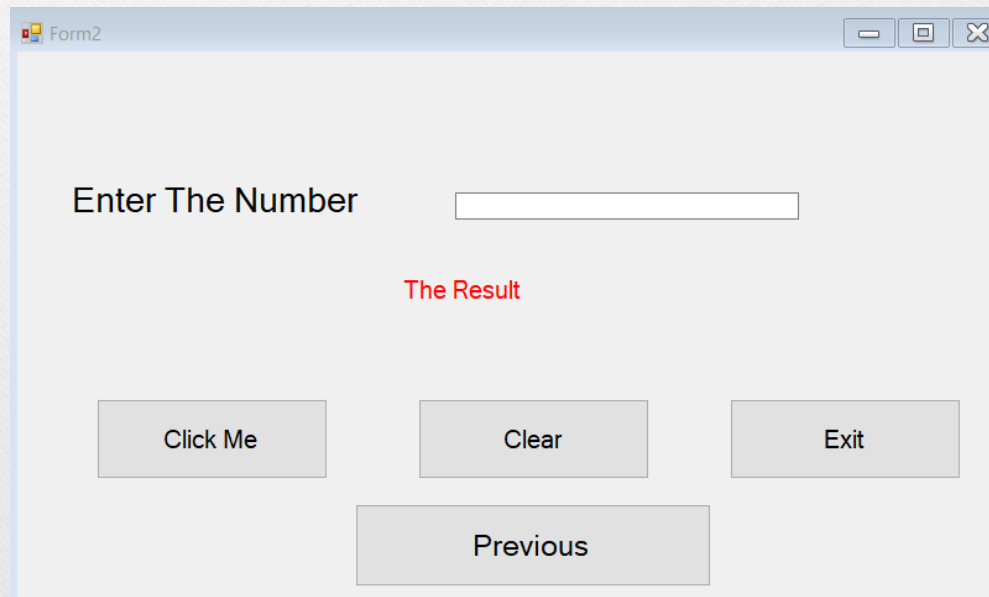

Else

Code to execute

End If

Decision Making Statements

- **Example:** Create the following form and find if the number is positive, negative or zero.

The screenshot shows a Windows application window titled "Form2". Inside the window, there is a text label "Enter The Number" followed by a single-line text input field. Below the input field is a label "The Result" in red text. At the bottom of the form, there are four buttons: "Click Me", "Clear", "Exit", and "Previous". The "Click Me" button is on the left, "Clear" is in the middle, "Exit" is on the right, and "Previous" is centered below the other three.

Decision Making Statements

```
Public Class Form2
    0 references
    Private Sub Button1_Click(sender As Object, e As EventArgs) Handles Button1.Click
        Dim number As Integer
        number = Val(TextBox1.Text)

        If number > 0 Then
            Label2.Text = "Positive Number"
        ElseIf number < 0 Then
            Label2.Text = "Negative Number"
        Else
            Label2.Text = "Zero"
        End If
    End Sub

    0 references
    Private Sub Button4_Click(sender As Object, e As EventArgs) Handles Button4.Click
        Form1.Show()
        Me.Hide()
    End Sub

    0 references
    Private Sub Button2_Click(sender As Object, e As EventArgs) Handles Button2.Click
        TextBox1.Clear()
    End Sub

    0 references
    Private Sub Button3_Click(sender As Object, e As EventArgs) Handles Button3.Click
        End
    End Sub
End Class
```

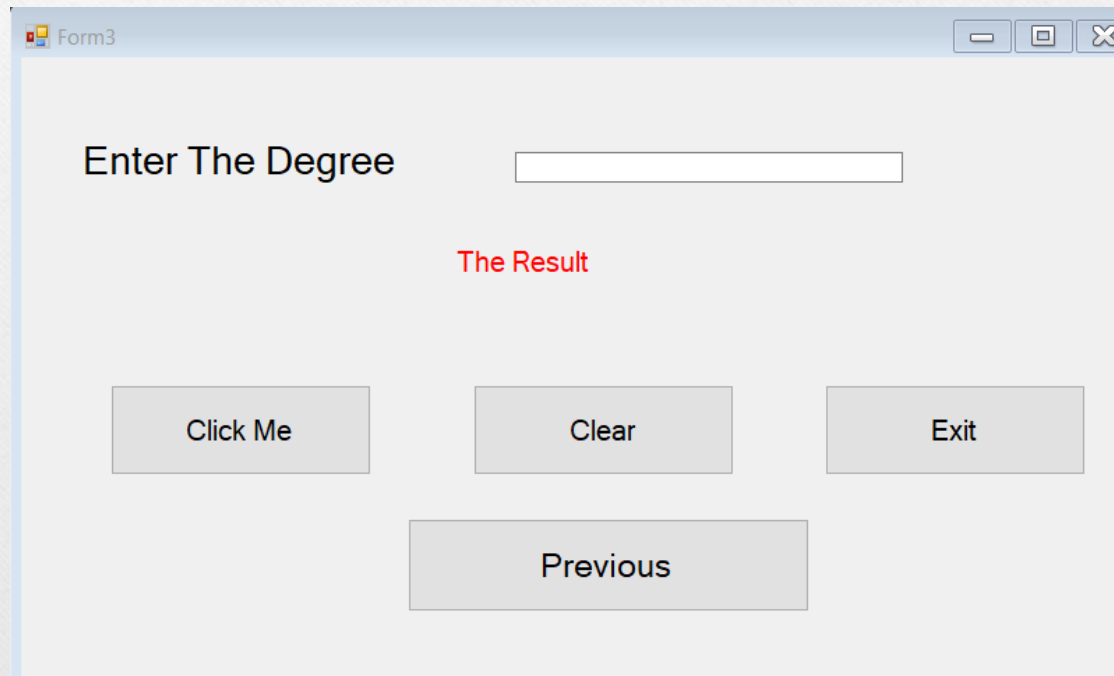

Select Case

- Select Case is used when you want to compare **one variable** against multiple values.
- It is cleaner than many ElseIf statements.
- **Basic Syntax**

```
Select Case expression
  Case value1
    Code
  Case value2
    Code
  Case Else
    Default code
End Select
```

Select Case

- Example: Categorize the degree from (A to Fail).

The screenshot shows a Windows application window titled "Form3". Inside the window, the text "Enter The Degree" is followed by a text input field. Below this, the text "The Result" is displayed in red. At the bottom of the form, there are four buttons: "Click Me", "Clear", "Exit", and "Previous". The "Click Me" button is on the left, "Clear" is in the middle, "Exit" is on the right, and "Previous" is centered below the other three.

Select Case

References

```
Private Sub Button1_Click(sender As Object, e As EventArgs) Handles Button1.Click
    Dim X As Integer
    X = Val(TextBox1.Text)
    Select Case X
        Case 90 To 100
            Label2.Text = "A"
        Case 80 To 89
            Label2.Text = "B"
        Case 70 To 79
            Label2.Text = "C"
        Case 60 To 69
            Label2.Text = "D"
        Case 50 To 59
            Label2.Text = "E"
        Case Else
            Label2.Text = "Fail"
    End Select
End Sub
```

Thank You
